

CAMPUS COPILOT

AI ASSISTANT

Team Name : The Nine Nine

Palchin Sharma, Snehil Gupta

AI for Smarter Campus Information

Page 02

Problem Statement

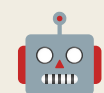

**"Campus information is scattered.
Clarity is nowhere."**

**Emails + WhatsApp + Notices + Societies → Information
overload**

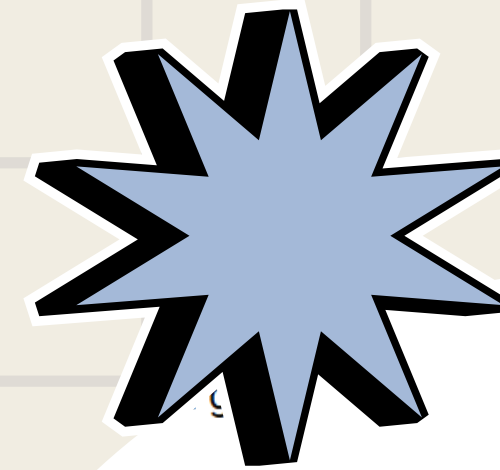

Core Idea

**Turn:
50 messages → 5 priorities → clear actions**

What We Built

**Campus AI — Your Personal Campus Information
Assistant**

What Actually Matters to Me?

Round 1 - Turn Campus Noise into Student Action

Page 03

GOAL 01 — STRUCTURE

Convert every announcement into **structured, actionable information**.

GOAL 02 — RELEVANCE SCORE

Score each announcement against the **student's interests, eligibility, schedule and urgency**—so they instantly know what actually matters to them.

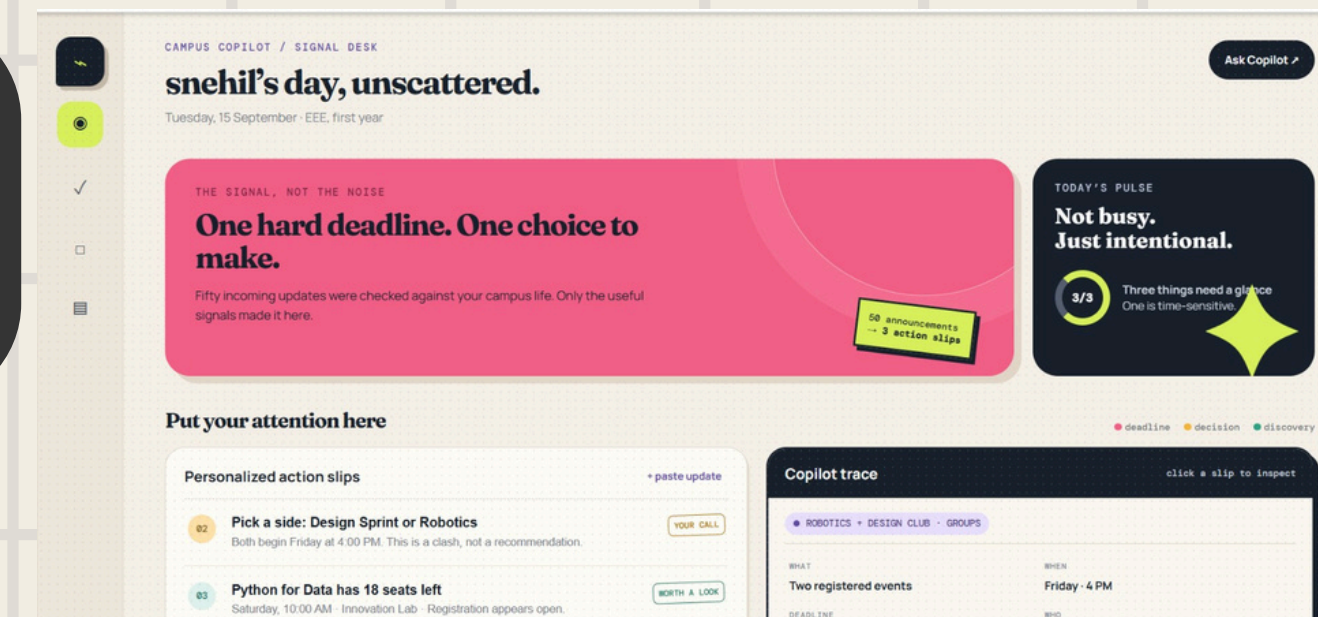

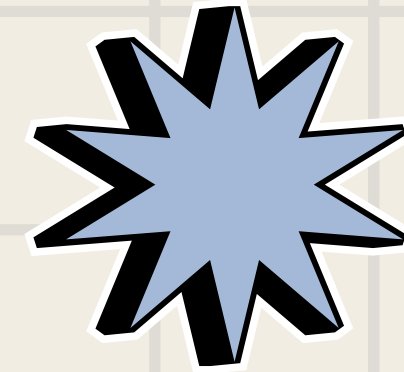

50 announcements → AI extraction → Relevance scoring → Personalized feed → Student action

Fifty Messages. One Impossible Afternoon.

Page 04

Round 2- From Noise to Clarity

GOAL : The AI assistant should organize and streamline all the announcements and notices in a foolproof action plan taking in the interests of the user and maximizing the productivity 📖

Priority = Urgency 35% + Consequence 30% + Conflict 20% + Flexibility 15% → Score with Rank

We don't build another announcement feed. We build a personal filter between the student and campus noise.

Summarization tells you what a message says; our system tells you whether it matters to you and what you should do about it.

Why our app stands out

Page 05

AI Enabled

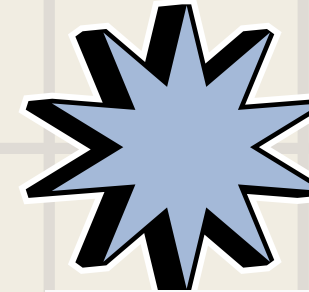

- Pre-configured and configurable prompts for user insight and actions

Relevance Scoring

- Our AI assistant comes with clear decision explainability

A personalised touch

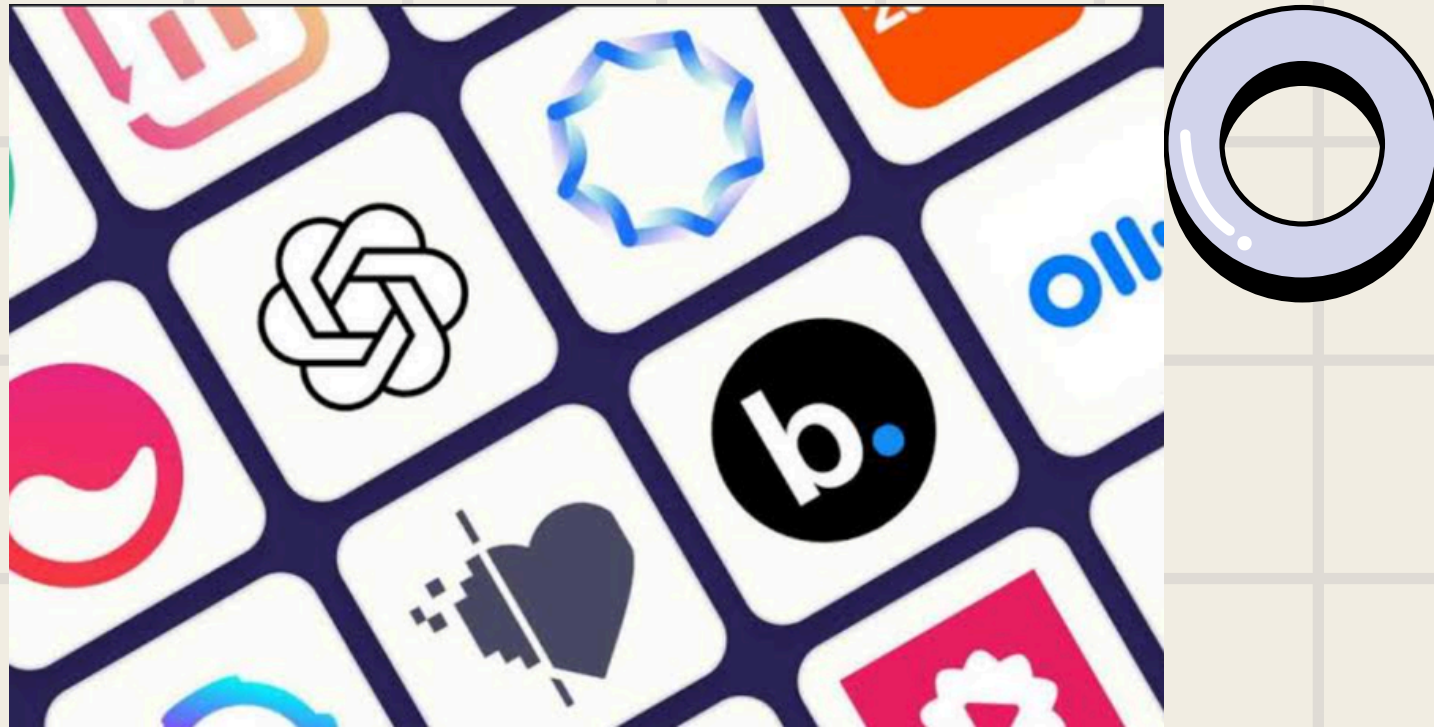

- Personalized companion assistance based on your profile and preferences.

We'll make the 100-point score based on:

- Interest match — 30
- Eligibility — 20
- Schedule fit — 15
- Urgency/deadline — 15
- Action required — 10
- Personal preference — 10

And importantly, the AI extracts these factors from the announcement, while your code calculates the final score. That makes the score explainable instead of looking like a random AI number.

Our goal was to ensure that the student using our web app must face negligible issues and should be comfortable as well. To make sure that the experience is hassle free, we have used various tools

- Codex - Prompted by our team to create a seamless interface for the student
- ChatGPT - AI assistant to help us code easily
- Co Pilot -
- Git hub -
- VS Code -
